In addition to its exceptional performance and reliability, this device boasts a comprehensive suite of monitoring and control capabilities, easily accessible via Ethernet, serial RS232, RS485 interfaces, or dry contacts. It is the premier choice for demanding mobile and fixed applications, specifically designed for outdoor installations, and offers the advanced capability to utilize high MODCOD (up to 256 APSK) for broadcast contribution, as well as for Cellular Backhaul (CBH) and high-capacity data transmission for VSAT and SCPC User Terminals such as ESTELLA WaveSwitch modems that

combine both TDMA and dynamic SCPC waveforms in one modem. With an IP67 ingress protection rating, the device can be mounted outdoor under the direct sun rays on an antenna boom/kingpost, on the platform behind the antenna, or inside the antenna hub, effectively eliminating the W/G RF loss commonly associated with indoor units. Additionally, it does not require air-conditioning, resulting in significant reductions in the ongoing OPEX electrical costs and maintenance expenses, while eliminating the need for nearby shelter construction
